

Your claims adjudicators need a friend!

Friendly is a robotic cognition platform that process claim applications, medical reports and insurance documents into a short structured medical report with a **chronological timeline of long-term condition treatments**, with a full view of related lab results, medications and care details

Full capture of long-term care conditions

Faster claim approach by generating a clear medical summary overview with:

- Applicant's vitals & health details
- Drug prescriptions and dosages
- Medical procedures & equipment
- Condition timeline from diagnosis to recent doctors' visits
- Imaging, radiology & lab results
- Lifestyle, and non-medical risks

Leading accuracy

Automated AI digitization of complex claim applications with handwriting and medical reports with **95%** accuracy across extracted documents

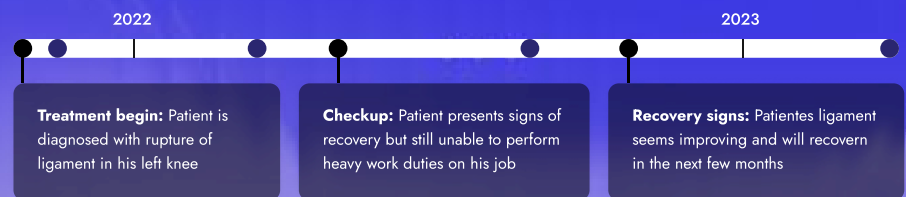

Focus on efficiency

Access claims faster and get ahead of competition by automating the manual busy-work, focusing on making quick and accurate risk managing decisions

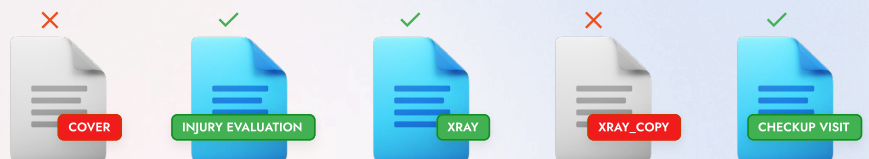

Treatment Timeline

Constructs a narrative from all available documents, giving underwriters the full story of a patient's care journey and outcomes.

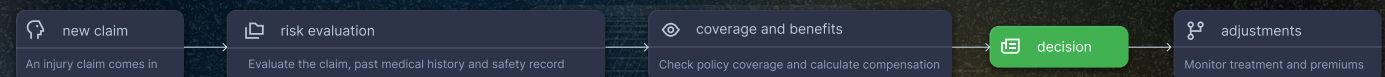

Pay only for what you use

Don't pay for processing **empty, irrelevant, out-of-date** or **duplicate** pages

Integrates into your workflow

Digitize & process claim documents

Get a full picture of patient's health

Generate treatment history summary

Cross-reference injury claim with medical history and company coverage

Amend treatment notes to patient's medical history

Let's be friends...
